Next Benchmark Criterion

Abstract

The current active-primary theorem now proves that the current centered hidden-response source-balance law $\mathfrak{B}^{\mathrm{disp,hid,res,src,bal}}$ is already the canonical square-root image law of a smaller centered hidden-response source-penalty kernel law $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$ on the fixed displacement fibers. The current centered hidden-response residual-source law $\mathfrak{P}^{\mathrm{disp,hid,res,src}}$, the current centered hidden-response residual law $\mathfrak{N}^{\mathrm{disp,hid,res}}$, the current hidden-response Hessian minimization law $\mathfrak{M}^{\mathrm{disp,hid,min}}$, the current square-root operator core $\mathfrak{O}^{\mathrm{disp,body,sqrt}}$, the current section-centered displacement-body quadratic forcing law $\mathscr{F}^{\mathrm{disp,resp,vis,body}}$, the visible-response operator family $S^{\mathrm{disp,resp,vis}}$, and the canonical minimal visible-response representative $\mathfrak{S}^{\mathrm{disp,resp,red,min}}$ are therefore downstream consequences of that smaller source-penalty kernel package rather than separately primitive data.

This note records the routing consequence of that gain. The next honest benchmark-facing move must now derive or justify the current centered hidden-response source-penalty kernel law $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$ itself from still more primitive explicit substrate structure while preserving the same benchmark one-metric package, the same ordinary matter route, and the same claim boundary. Another manuscript that merely restates the same source-penalty kernel package, merely rewrites the same source-balance law $\mathfrak{B}^{\mathrm{disp,hid,res,src,bal}}$, merely rewrites the same centered hidden-response residual-source law $\mathfrak{P}^{\mathrm{disp,hid,res,src}}$, merely rewrites the same centered residual package $\mathfrak{N}^{\mathrm{disp,hid,res}}$, merely rewrites the same hidden-response Hessian minimization law $\mathfrak{M}^{\mathrm{disp,hid,min}}$, merely recovers the same square-root operator core $\mathfrak{O}^{\mathrm{disp,body,sqrt}}$, merely restores the same body-level forcing law $\mathscr{F}^{\mathrm{disp,resp,vis,body}}$, merely re-extends it to the same visible-response operator family $S^{\mathrm{disp,resp,vis}}$, merely re-presents the same canonical minimal visible-response representative $\mathfrak{S}^{\mathrm{disp,resp,red,min}}$, or restores the full current-body image core $\mathfrak{S}^{\mathrm{disp,resp,cbimg}}$ or any other larger same-output package does not count as the clean next step. The one operative metric remains exactly $g^\sharp$, there is no second operative metric, the low-energy matter law is not enlarged, and no stronger promotion language is licensed.

1. Introduction

The active derivational program of Æther-flow Interpretation of Relativity has now moved one layer deeper below the centered-hidden-response-source-balance-law frontier itself. The new theorem shows that the current centered hidden-response source-balance law is no longer primitive once one

keeps only the smaller centered hidden-response source-penalty kernel law whose positive square root canonically recreates the balance operator and balance target.

The present note records the routing consequence of that gain. It does not reopen the centered hidden-response source-balance law, the centered hidden-response residual-source law, the centered hidden-response residual law, the hidden-response Hessian minimization law, the square-root operator core, the body-law presentation, the visible-response operator family, the canonical minimal visible-response representative, the current-body image core, the larger reduced-carrier presentation, the older projection/body presentation, or the full displacement-response substrate law as if any of those were again the live burden. It records only which kind of next manuscript would now count as an honest benchmark-facing gain below the centered-hidden-response-source-penalty-kernel-law frontier.

Framework and claim boundary. Æther / Æther-flow framework denotes the broader Æther / Æther-flow framework built on the claims that the Æther is the underlying four-dimensional substrate of reality, the Æther-flow is its intrinsic ordered motion, observed three-dimensional space is the local experiential slice of that deeper substrate, S-time is the experienced order of change arising from matter, light, and the Æther-flow, and observed expansion is the three-dimensional appearance of deeper four-dimensional ordered motion. Within that framework, Æther-flow Interpretation of Relativity denotes the exact-closure theory in which the effective gravitational dynamics are adopted to be exactly Einsteinian with universal matter coupling. In the active sequence, *adoption* means use of that established relativistic dynamics without claiming substrate derivation, while *derivation* is reserved for a first-principles recovery from explicit substrate variables.

The present note stays strictly inside that boundary. It records only which kind of next manuscript would now count as an honest benchmark-facing gain below the centered-hidden-response-source-penalty-kernel-law frontier.

2. Fixed Inputs

Definition 1 (Current centered-hidden-response-source-penalty-kernel frontier inputs)**.** *The criterion recorded here uses the following fixed inputs.*

1. *The benchmark exact-closure package, which fixes the public one-metric GR target of the repository.*

2. *The benchmark gatekeeping layer, including the recorded safeguard that blocks same-output deeper-origin relays from counting as new front-line progress once the live benchmark-relevant datum is unchanged.*

3. *The preserved theorem chain showing that the visible-response datum already follows from the smaller body-level forcing law, that even that body-level forcing law already follows from a smaller square-root-controlled hidden package, that even that hidden package already follows from the smaller centered hidden-response residual law* $\mathfrak{N}^{\mathrm{disp,hid,res}}$*, that even that centered residual law already follows canonically from the smaller centered hidden-response residual-source law* $\mathfrak{P}^{\mathrm{disp,hid,res,src}}$*, that even that residual-source law already follows canonically from the smaller centered hidden-response source-balance law* $\mathfrak{B}^{\mathrm{disp,hid,res,src,bal}}$*, and now that even that source-balance law already follows canonically from the smaller centered hidden-response source-penalty kernel law* $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$*.*

4. *The recorded fact that the current body-response core and all currently recorded downstream benchmark-facing consequences already factor through the same hidden-response Hessian minimization law* $\mathfrak{M}^{\mathrm{disp,hid,min}}$*, and therefore now through the same centered residual law* $\mathfrak{N}^{\mathrm{disp,hid,res}}$*, the same centered residual-source law* $\mathfrak{P}^{\mathrm{disp,hid,res,src}}$*, the same centered source-balance law* $\mathfrak{B}^{\mathrm{disp,hid,res,src,bal}}$*, and the same centered source-penalty kernel law* $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$*.*

Remark 1. *The present note does not replace those manuscripts. It records the routing consequence of reading them together under the active safeguard against recursive depth drift.*

3. Why the Live Burden Now Sits Below Source-Penalty-Kernel-Law Restatement

Proposition 1 (The live burden is renewed below centered-hidden-response-source-penalty-kernel-law restatement)**.** *At the current stage of the primitive-reservoir observer-reduction line, the centered-hidden-response-source-penalty-kernel-law theorem renews the live benchmark-facing burden below any mere restatement of the same centered hidden-response source-penalty kernel law* $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$ *or of the same centered hidden-response source-balance law* $\mathfrak{B}^{\mathrm{disp,hid,res,src,bal}}$ *that it already forces canonically.*

Proof. The new theorem changes benchmark-facing status because it proves that the separate centered hidden-response source-balance law is not primitive once the smaller source-penalty kernel package is fixed. A later manuscript that merely rewrites the same source-penalty kernel law, merely rebuilds the same source-balance law from it, merely restores the same centered hidden-response residual-source law, merely restores the same centered residual law, merely restores the same hidden-response minimization law, merely restores the same square-root operator core, merely rewrites the same body-level law, or merely replays the same visible-response output removes no remaining benchmark-facing freedom. The live burden therefore no longer sits on another source-balance-law replay or on another same-source-penalty-kernel-law restatement. It sits on deriving that source-penalty kernel law itself from still more primitive explicit substrate structure, or on forcing an equivalent strictly smaller package that canonically yields it. □

Definition 2 (Benchmark-neutral same-source-penalty-kernel relay below the current frontier)**.** *A* benchmark-neutral same-source-penalty-kernel relay below the current frontier *is a manuscript that preserves the same benchmark one-metric output, the same ordinary matter route, the same centered hidden-response source-penalty kernel law* $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$*, the same centered hidden-response source-balance law* $\mathfrak{B}^{\mathrm{disp,hid,res,src,bal}}$*, the same centered hidden-response residual-source law* $\mathfrak{P}^{\mathrm{disp,hid,res,src}}$*, the same centered hidden-response residual law* $\mathfrak{N}^{\mathrm{disp,hid,res}}$*, the same hidden-response Hessian minimization law* $\mathfrak{M}^{\mathrm{disp,hid,min}}$*, the same square-root operator core* $\mathfrak{O}^{\mathrm{disp,body,sqrt}}$*, the same section-centered displacement-body quadratic forcing law* $\mathscr{F}^{\mathrm{disp,resp,vis,body}}$*, the same visible-response operator family* $S^{\mathrm{disp,resp,vis}}$*, the same canonical minimal visible-response representative* $\mathfrak{S}^{\mathrm{disp,resp,red,min}}$*, and the same downstream benchmark-facing consequences while merely restating that same source-penalty kernel law, merely replaying the same source-balance law, merely replaying the same residual-source law, merely replaying the same residual law, merely replaying the same hidden-response minimization law, merely replaying the same square-root operator core, merely replaying the same body-level law, merely replaying its operator extension, merely rewriting the same visible-response representative, restoring the already-spent full current-body image-core package*

$\mathfrak{S}^{\mathrm{disp,resp,cbimg}}$*, re-expanding to a larger reduced-carrier presentation, restoring the older projection/body presentation, replaying the full displacement-response substrate law, or otherwise carrying the same benchmark-facing datum through another larger same-output realization.*

4. The Current Post-Source-Penalty-Kernel-Law Criterion

Definition 3 (Admissible next benchmark-facing manuscript below the current frontier)**.** *Below the current centered-hidden-response-source-penalty-kernel-law frontier, a manuscript counts as an admissible next benchmark-facing move only if it does at least one of the following:*

1. *derives or justifies the current centered hidden-response source-penalty kernel law* $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$ *itself from still more primitive explicit substrate structure;*

2. *equivalently derives that current source-penalty kernel law as a canonical kernel law, selection law, penalty law, factor law, or image law of a still smaller explicit substrate package while preserving the same benchmark one-metric package, the same ordinary matter route, and the same claim boundary;*

3. *does one of the previous two without merely replaying the same centered hidden-response source-penalty kernel law* $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$*, the same centered hidden-response source-balance law* $\mathfrak{B}^{\mathrm{disp,hid,res,src,bal}}$*, the same centered hidden-response residual-source law* $\mathfrak{P}^{\mathrm{disp,hid,res,src}}$*, the same centered hidden-response residual law* $\mathfrak{N}^{\mathrm{disp,hid,res}}$*, the same hidden-response Hessian minimization law* $\mathfrak{M}^{\mathrm{disp,hid,min}}$*, the same square-root operator core* $\mathfrak{O}^{\mathrm{disp,body,sqrt}}$*, the same body-level forcing law* $\mathscr{F}^{\mathrm{disp,resp,vis,body}}$*, the same visible-response operator family* $S^{\mathrm{disp,resp,vis}}$*, or the same canonical minimal visible-response representative* $\mathfrak{S}^{\mathrm{disp,resp,red,min}}$*, and without restoring the full current-body-image-core package* $\mathfrak{S}^{\mathrm{disp,resp,cbimg}}$*, a larger reduced-carrier presentation, the older projection/body presentation, or the full displacement-response substrate-law presentation.*

Theorem 1 (Next honest benchmark-facing task below the current frontier)**.** *The next honest benchmark-facing manuscript below the current centered-hidden-response-source-penalty-kernel-law frontier must derive or justify the current centered hidden-response source-penalty kernel law* $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$ *itself from still more primitive explicit substrate structure, or derive an equivalent strictly smaller package that canonically yields it. A manuscript that only repeats the same source-penalty kernel package, only repeats the same source-balance package* $\mathfrak{B}^{\mathrm{disp,hid,res,src,bal}}$*, only repeats the same residual-source package* $\mathfrak{P}^{\mathrm{disp,hid,res,src}}$*, only repeats the same centered residual package* $\mathfrak{N}^{\mathrm{disp,hid,res}}$*, only repeats the same hidden-response minimization law* $\mathfrak{M}^{\mathrm{disp,hid,min}}$*, only restores the same square-root operator core* $\mathfrak{O}^{\mathrm{disp,body,sqrt}}$*, only re-reads off the same body-level law* $\mathscr{F}^{\mathrm{disp,resp,vis,body}}$*, only re-extends it to the same visible-response operator family* $S^{\mathrm{disp,resp,vis}}$*, only re-presents the same canonical minimal visible-response representative* $\mathfrak{S}^{\mathrm{disp,resp,red,min}}$*, or only restores a larger same-output package does not satisfy the criterion.*

Proof. By the preceding proposition, the live burden already lies below any mere restatement of the same centered hidden-response source-penalty kernel law or of the same source-balance-law and residual-source-law and centered-residual-law and hidden-response-minimization-law and square-root-core and body-law and operator-level presentations that follow from it. The current theorem has spent the option of treating the centered hidden-response source-balance law as primitive. Therefore a subsequent manuscript must improve on the centered hidden-response source-penalty

kernel law itself rather than merely accompany it through another representation. A deeper-origin manuscript can do so only if it derives or justifies that current source-penalty kernel law from still more primitive explicit substrate structure, or forces an equivalent strictly smaller package that canonically yields it. The remaining honest alternatives are therefore exactly those stated in the definition. □

5. What the Next Move Should Not Be

Proposition 2 (Screened next moves below the current frontier)**.** *Below the current centered-hidden-response-source-penalty-kernel-law frontier, none of the following is the default next benchmark-facing move:*

1. *another same-output relay that merely preserves the current centered hidden-response source-penalty kernel law* $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$ *and therefore merely reproduces the same centered hidden-response source-balance law* $\mathfrak{B}^{\mathrm{disp,hid,res,src,bal}}$*, the same centered hidden-response residual-source law* $\mathfrak{P}^{\mathrm{disp,hid,res,src}}$*, the same centered hidden-response residual law* $\mathfrak{N}^{\mathrm{disp,hid,res}}$*, the same hidden-response Hessian minimization law* $\mathfrak{M}^{\mathrm{disp,hid,min}}$*, the same square-root operator core* $\mathfrak{O}^{\mathrm{disp,body,sqrt}}$*, the same section-centered displacement-body quadratic forcing law* $\mathscr{F}^{\mathrm{disp,resp,vis,body}}$*, the same visible-response operator family* $S^{\mathrm{disp,resp,vis}}$*, the same canonical minimal visible-response representative* $\mathfrak{S}^{\mathrm{disp,resp,red,min}}$*, the same current body-response core, and the same downstream benchmark-facing consequences;*

2. *another manuscript that merely restores the centered hidden-response source-balance law or the centered hidden-response residual-source law or the centered hidden-response residual law or the hidden-response Hessian minimization law or the square-root operator core from the same source-penalty kernel law without deriving that source-penalty kernel law itself;*

3. *another restoration of the full current-body image-core package* $\mathfrak{S}^{\mathrm{disp,resp,cbimg}}$*, of a larger reduced-carrier presentation, of the older projection/body presentation, or of the full displacement-response substrate law as if those already-spent larger packages were again the honest current burden;*

4. *a manuscript that introduces a second operative metric, enlarges the ordinary matter law, or uses stronger promotion language.*

Proof. Items (1) and (2) fail the preceding criterion because they leave the renewed live burden unchanged. Item (3) fails because it returns to larger already-spent same-output packages rather than deriving the centered hidden-response source-penalty kernel law itself. Item (4) violates the fixed claim boundary of the benchmark package and therefore cannot count as a disciplined next step on the active line. □

Remark 2. *This screening statement is not a denial that those deeper or alternative manuscripts may matter strategically. It is a routing statement: they are not the default way to spend the next benchmark-facing move below the current frontier unless they do the same benchmark-facing work named above.*

6. Conclusion

The positive result of this note is routing discipline below the centered-hidden-response-source-penalty-kernel-law frontier. The new theorem remains the live benchmark-facing gain because it already proves that the current centered hidden-response source-balance law is a canonical consequence of the smaller centered hidden-response source-penalty kernel law, and the earlier centered-hidden-response-residual-source-law from centered-hidden-response-source-balance-law theorem remains preserved handoff history because it first removed the separate centered hidden-response residual-source law as the primitive stopping point before the present theorem spent the separate centered hidden-response source-balance law itself.

The scope remains narrow and honest. The benchmark package is unchanged: the one operative metric is still exactly $g^\sharp$, the ordinary matter route is unchanged, there is no second operative metric, and the low-energy matter law is not enlarged. Nothing here upgrades adoption to derivation or licenses stronger promotion language.

The next open burden is therefore clear. The next benchmark-facing manuscript should derive or justify the current centered hidden-response source-penalty kernel law $\mathfrak{K}^{\mathrm{disp,hid,res,src,bal,pen}}$ itself from still more primitive explicit substrate structure, or derive an equivalent strictly smaller package that canonically yields it. Another same-centered-hidden-response-source-penalty-kernel-law restatement, another same-centered-hidden-response-source-balance-law restatement, another same-centered-hidden-response-residual-source-law restatement, another same-centered-hidden-response-residual-law restatement, another same hidden-response-minimization-law restatement, another same square-root-core restatement, another same body-law restatement, another same operator-extension relay, another same visible-response restatement, another restored current-body-image-core package, another larger reduced-carrier replay, another restored projection/body presentation, or another replay of the full displacement-response substrate law is not the clean next manuscript target at current scope.
